This Book Help Saved Me \$8100.By KSQDAlthough I don't work in the trades, I'm the kind of guy that spent his youth tearing apart engines and working on cars. Suffice it to say I know my way around mechanical things. I live in Atlanta where all two story homes have a separate HVAC system for each floor. You can imagine my wallet shock to find both my 22 year old HVAC units needed replacement with a median quote of \$11,500. My research on the internet provided information that I could buy the exact name brand equipment online for \$3400. That said, I had no idea how to install it or should I say I had no experience in installing HVAC. That's when I learned about The Furnace Book. Paul King walks you through the complete process of retrofitting your replacement units to your existing duct and vent system. The pictures are excellent and the sheet metal advice is invaluable. It's written in a step by step manner that laymen can understand. This book is an excellent resource where you are shown the secrets of the trade. I know of no other book like it and would commend it to anyone wanting to understand the process of installing new HVAC equipment. As you can see my savings on the project were \$8100. I would have to say The Furnace Book would be cheap at twice the price.0 of 0 people found the following review helpful. good info on basic modelsBy E.Harrisbook ok ,expected more on high energy air condition unit. good info on basic models.0 of 0 people found the following review helpful. This is a rare find.By cvxmikeI replaced my own furnane two years ago. This book was a valuable resource. There are few books on this subject. The book is written for beginners.

Installing a furnace may sound like a job that must be done by an expert. You may be surprised to know that by following my simple instructions, you can install your own furnace in no time. Installing your own furnace has significant financial advantages. You may be surprised that installing your own furnace can save you a tremendous amount of money. Completing this task on your own can save you as much as \$2500.00. This amount is an estimate since each furnace is different and some cost more than others do. You can save even more, possibly another \$1500.00, if you install your own central air conditioning. Installation manuals that come with the furnace are written for someone that does heating for a living, usually very complicated without prior knowledge of the subject. This handy book was designed for the first time furnace installer, with the intention of guiding you through each step of the installation process. Along the way of installing your new furnace Paul will be there for you with step by step "how to" instructions.
